## 3M MASKING FILM

3M Masking Films are high-density, non-porous plastic films specially designed for paint masking and paint overspray protection. These films are for indoor or very limited outdoor use only. At earliest opportunity, remove plastic films from gelcoat or painted surfaces to eliminate moisture from getting trapped between plastic and substrate. Trapped moisture may inhibit curing and plastic film may "imprint" on surface.

### 3M™ HANDMASKER™ PRE-FOLDED MASKING FILM ROLLS

3M's "Preferred" critical indoor masking film. These rolls are pre-folded and will fold down to various widths. Plastic films are not for extended outdoor use. The 9" x 100' roll folds down to 72" width and 12" x 100' roll folds down to 99" width to offer paint overspray protection for larger surface areas on deck or hull.

## COVERAGE CHARTS FOR ADHESIVE SEALANT PRODUCTS

Given the desired diameter of a bead or the dimensions of a seam, the coverage obtained from a cartridge can be looked up in the following charts. Note that the values are calculated for “no waste”. The actual coverage will be based on application technique and overfill.

Bead Diameter (inch)		Length of Bead (lineal feet)	
Fractional	Decimal	for 10 fl. oz.	for 3 fl. oz.
1/8"	0.125	126.2	37.8
1/4"	0.250	31.6	9.4
3/8"	0.375	14.0	4.2

## SQUARE FOOT AREA COVERAGE

Should it be necessary to cover an area with the adhesive sealant, the material should be dispensed from the container and spread with a trowel. Most trowels for spreading adhesives will have a notched edge to facilitate control of the thickness being applied. When the notch depth is known or can be measured, the coverage area can be determined from the following tables. Should it be necessary to apply a solid layer of a specific thickness, take the value given in the following table and divide the area by two.
